

TraxFast Locator Plus

Benefits of TraxFast Locator Plus

TraxFast Locator Plus is a packaged system that will immediately generate those benefits resulting in more efficient warehouse operations. Bundling software, equipment and barcode labels together in one system gives warehouse management the comfort of dealing with one supplier to satisfy their demanding warehouse requirements. eTeklogics' Professional Services Program assures that any integration needs are met to provide a seamless interface between multi-supplier systems. Our support programs for both software and equipment provide assurance that the system will function and grow with your operations as time passes.

How can I utilize my warehouse space more efficiently?

Accurate Location Inventory. Locator Plus tracks inventory by location accurately. Before analysis can be performed on capacity utilization you must first have accurate data showing what already exists. A small increase in inventory accuracy causes significant gains in inventory planning resulting in lower inventories freeing up warehouse space.

Obsolete/Slow Moving Inventory Monitoring. Since Locator Plus can track inventory by container, whether pallet or individual case, each unit of inventory is date stamped. Using this data, warehouse personnel can move those inventories to less than prime space or dispose of those inventories that will never ship.

Filling Locations to Capacity. Locator Plus will direct the warehouse personnel to fill locations in an efficient manner by making sure the same product is together and that all slots in a location are filled before spreading the same inventories elsewhere.

How can I utilize my personnel more efficiently?

Real Time Inventory Visibility. Locator Plus utilizes wireless networks to link the warehouse personnel to their inventory data. Instantly, the warehouse person will get the answers to the "Where is it?" and "Do I have enough?", Answering these questions eliminates the nonproductive time in searching.

Directing Putaway. Locator Plus will direct inbound materials to a sensible stocking location. The warehouse person will not have to search for open spots nor take the risk of moving product to a location that does not conform to your warehousing policies.

Eliminate Mistakes. Locator Plus has the real time link to your enterprise data. Any Locator Plus activity performed by the warehouse person is edited and verified for accuracy before it is accepted. This means that after-the-fact inventory investigations are eliminated.

Eliminate or Reduce Paperwork. Locator Plus supports barcode scanning as its vehicle for inputting data eliminating the need to fill out forms, eliminating transposition errors and reducing overall data entry time.

Making Use of the Information. Locator Plus monitors your inventories from receipt to shipping. This information is stored and available to be transferred to other applications automatically in support of satisfying customer compliance requirements such as UCC labeling and ASN generation. Shipping errors are reduced, data entry and labeling stations are eliminated while customer service and satisfaction is increased.
